Lakeraven

Capability Statement · Native-Owned Small Business

Technology modernization, custom software development, and AI-assisted delivery for public sector programs and commercial enterprises

UEI	WY1JY5ML91Y7	**CAGE**	124D2
NAICS	541511 (primary), 541512, 541519, 541611	**Registration**	Active in SAM.gov
Ownership	Native-Owned; ISBEE (Buy Indian Act)	**Contracting**	Federal, state, tribal, commercial; prime or teaming

Kimball Bighorse, Owner & CTO · kimball.bighorse@lakeraven.com · info@lakeraven.com · https://www.lakeraven.com

Lakeraven, LLC is a Native-owned technology firm based in Washington State. We help tribal, state, and local governments, public programs, and private enterprises modernize legacy infrastructure, construct core operational software, and implement practical AI solutions that optimize staff efficiency. We leverage open standards and open-source architectures, deliver in iterative cycles, and empower client teams to maintain and scale solutions long term. Built on our foundation of developing our own healthcare products for tribal nations, our technical expertise seamlessly extends to any organization operating on legacy systems.

Core capabilities

Technology modernization

- Rebuilding and replacing legacy infrastructure, including MUMPS/M-based platforms such as RPMS
- Migrating complex data sets from legacy systems to scalable, open-source platforms
- Developing robust interoperability integrations and APIs, including HL7 FHIR R4 and US Core standards

Custom software development

- Engineering secure, maintainable web applications built on proven open-source architectures
- Establishing modern cloud architecture, automated CI/CD pipelines, system monitoring, and scaling frameworks
- Implementing test-driven development methodologies, converting complex eligibility and business rules into executable tests

AI-assisted technology

- Leveraging AI-assisted engineering for legacy software modernization, such as converting IHS quality-measure logic from M/MUMPS into fully tested code
- Streamlining manual, document-intensive operational processes through targeted automation
- Providing strategic guidance on high-impact AI integration while maintaining robust human oversight and accountability

Digital strategy & enablement

- Conducting technical discovery, defining product roadmaps, and executing human-centered design research
- Performing build-versus-buy analyses, managing RFP reviews, and leading objective vendor evaluations
- Facilitating team formation, technical coaching, and operational playbooks to ensure long-term client ownership

Applied: Indian health

Our own products and consulting services engineered for tribal and rural healthcare programs, designed to operate independently or integrated into existing ecosystems.

- **Corvid** (early access): End-to-end Purchased/Referred Care management, handling workflows from initial

referral to budget-capped authorization and Medicare-like claims repricing. Works alongside the EHR a program already uses.
- **Rook** (early access): Quality reporting for tribal healthcare systems. Ingests standard FHIR R4 Bulk Data exports and generates FHIR MeasureReports, so one engine works across EHRs. Implements three GPRA measures derived from IHS logic with executable parity testing. UDS reporting capabilities are currently under active development.
- **BaseroII** (pre-release): Custom-built tribal enrollment platform. An automated API for Purchased/Referred Care eligibility verification is currently in development.
- **Lakeraven EHR** (coming soon): Modern web-based EHR engineered on top of RPMS, eliminating desktop client dependencies. Features robust FHIR R4 / US Core APIs supporting tribal enrollment datasets, SMART on FHIR app launch, electronic progress note signatures, and an append-only audit logging system for PHI tracking.
- **OpenRPMS** (openrpms.org): Cloud-ready modernization of RPMS developed in collaboration with Civic Studio, being released as open source (Apache-2.0). Built and tested across both YottaDB and InterSystems IRIS data environments.
- **Self-Governance Transition**: Strategic planning and data and workflow mapping services for tribes transitioning from IHS-administered operations to self-directed healthcare programs.

Experience

- **Tribal Nation Client (Title I 638), Pacific Northwest**: Executed health IT discovery and implementation strategy for an 11-program health department (2026). Conducted stakeholder interviews across 32 staff members and 20 programs; delivered a comprehensive discovery assessment, detailed RPMS technical requirements, and a prioritized roadmap recommending a phased RPMS deployment on tribe-controlled infrastructure. Policy contributions included IHS briefings, Annual Funding Agreement amendments, and PRC and pharmacy coverage policy development.
- **New Mexico Bureau of Geology and Mineral Resources (NM Tech)** (July 2025 – June 2026): Delivered end-to-end product management, user experience design, user research, and software engineering for Ocotillo, the Bureau's core groundwater system of record, through its V1 launch. Co-developed solutions alongside internal engineers, including migrating unnormalized legacy SQL Server databases to PostgreSQL/FastAPI. Established AI-assisted development workflows (including a shared context repository and governance policy) agile delivery standards and a NIST CSF 2.0 security plan approved by the parent IT office before transitioning complete operational ownership to Bureau staff. Geothermal Initiative: Completed discovery research and formulated a two-phase migration plan for the legacy well database.
- **StrataEdge AI (Commercial AI Consultancy)**: Provided specialized AI product engineering as a subcontractor (December 2025 – present), developing an automated AI agent for drafting proposals and executive pitch decks, alongside implementing advanced data pipelines using Snowflake and Snowflake Cortex AI for a commercial client.

Project team

Lakeraven assembles subcontractors per project, led by Kimball Bighorse. Ryan Wold and Moroni Benally work with Lakeraven across projects, and the full team delivered our tribal health client engagement together.

- **Kimball Bighorse**, Owner & CTO; former 18F technologist (GSA)
- **Ryan Wold**, Civic Studio: lead developer; cloud infrastructure, CI/CD and federal ATO experience; civic tech work with GSA, U.S. Commerce, City of San Francisco and State of Colorado.
- **Moroni Benally**, Indian health policy lead: 638 self-determination and self-governance; led IHS briefings, Annual Funding Agreement amendments and PRC and pharmacy coverage policy for the tribal client engagement.
- **Sabrina Fonseca**, Biba Design: product and service design; product owner for the tribal client engagement.
- **Atma Shetty**, healthcare product lead: 20+ years in healthcare product (Teladoc Health, Kaiser Permanente, EHR implementation); product lead for the tribal client engagement.
- **VitelNet**: legacy RPMS expertise; RPMS technical assessment for the tribal client engagement.
